Crayola

Materials

- Silicone Food Warming Mat

  This model includes a heat resistant pad and child lock. Set to 140 degrees.

- Copy paper
- Old + busted crayons*
- Gloves (optional)

*I had students sort the crayons by colors then we soaked them in water overnight. This helps to remove the wrappers. Washable crayons will dissolve!

Use in a well ventilated area!

Other ideas...

- Use watercolor paper and draw outlines with crayon. Add color with watercolor paints.
- Use cardstock and fill the space with color. Paint with two layers of ½ acrylic paint + ½ dish soap. Let dry and you now have your own DIY scratch art!
- Create textured papers to use for collage.
- Use construction paper crayons on colored paper.

Thanks for joining us!
